<script src="https://ajax.googleapis.com/ajax/libs/angularjs/1.6.9/angular.min.js"></script>
<body ng-app="">
Try writing an E-mail address in the input field:
<form name="myForm">
<input type="email" name="myInput" ng-model="myInput">
</form>
The input's valid state is:
<h1>{{myForm.myInput.$valid}}</h1>
Note that the state of the input field is "true" before you start writing in it, even if it does not contain an e-mail address.
</body>
</body>
</body>
</html>
```
